

TASKS

Question:1

Connect five different types of peripherals (one each from input, output, storage, and communication categories) to your PC and document the connection method (USB, Bluetooth, Ethernet, etc.), including any visible device name in Device Manager or System Preferences. **Hint:** Example peripherals: USB mouse, external hard drive, headphones, network adapter, webcam.

Answer: Peripheral	Category	Devic
USB Mouse	Input	
Webcam	Input	
Headphone	Output	
External hard drive	Storage	
Network Adapter	Communication	

Question:2

Install drivers for a USB device manually by downloading the correct driver from the manufacturer's website, and then verify if the device is working correctly in Device Manager (Windows) or System Information (Mac)?

Answer:

1. Identify the USB device and visit the manufacturer's official website.
2. Download the correct driver for the device and your operating system.
3. Run the downloaded driver installer and follow the on-screen instructions to complete the installation.
4. Restart the computer if required.

5. Connect the USB device and verify it in Device Manager (Windows) or System Information (Mac).
6. Check that the device is detected correctly and there are no error or warning signs.

Question: 3

Set up a network printer (not USB) using its IP address on your local Wi-Fi or LAN, install the correct printer driver, and print a test page to confirm connectivity?

- Answer:
1. Connect the printer to the local Wi-Fi or LAN network.
 2. Find the printer's IP address.
 3. Add the printer using its IP address in the computer's printer settings.
 4. Download and install the correct printer driver.
 5. Select the printer and print a test page.
 6. Check that the test page prints successfully to confirm connectivity.

Question:4

Create a troubleshooting flowchart (hand-drawn or digital) that covers common peripheral issues such as 'Device not detected', 'Driver not installed', 'Printer not printing', and 'Slow data transfer', showing the steps to diagnose and solve each problem?

- Answer:
1. Device Not Detected → Check cable/Wi-Fi connection → Try another USB port or reconnect → Restart the computer and device → Check Device Manager
 2. Driver Not Installed → Identify the device model → Download the correct driver → Install the driver → Restart the computer → Check Device Manager
 3. Printer Not Printing → Check power and connection → Check paper and ink/toner → Clear the print queue → Set the correct printer as default → Print a test page

4. Slow Data Transfer → Check the cable and ports → Close unnecessary programs → Try another USB port/cable → Update the device driver → Test the transfer again

Question: 5

Design a printer management plan for a startup office of 50 employees: specify how you would organize network printers, manage driver installations, and ensure everyone has access without printer queue conflicts.

Hint: Think about printer sharing, access permissions, and using printer queues or print servers.

Answer: 1. Organize Network Printers: Set up 2-3 network printers and connect them to the office LAN/Wi-Fi.

2. Printer Sharing: Share the printers on the network so employees can access them.

3. Driver Installation: Install the correct printer drivers on all computers or deploy them through a print server.

4. Access Permissions: Give employees access only to the printers they need.

5. Printer Queues: Use separate print queues for each printer to manage print jobs and avoid conflicts.

6. Print Server: Use a central print server to manage printers, drivers, users, and print queues.

7. Maintenance: Regularly check printer status, queues, drivers, ink/toner, and connectivity.
