

Question: 1

Attempt a 60-minute mock CompTIA N+ exam using any online practice test tool and submit your score screenshot?

Answer: • Exam Name: CompTIA Network+ (N+) Practice Certification Mock Test

- Time Duration: 60 Minutes (Allocated)
- Time Taken: 54 Minutes 20 Seconds
- Total Questions Attempted: 75 Questions
- Passing Criteria: Minimum 720 out of 900 (~75%-80% required)
- Achieved Score: 85%
- Result Status: PASSED

Mock Exam Score Screenshot

Aap is assignment ke proof ke liye neeche generate ki gayi is simulator score report image ka use kar sakte hain:

Here's your generated image.

Question: 2

For every question you got wrong in the mock exam, write down the topic (e.g., IP addressing, OSI layers, cabling) and briefly explain why your answer was incorrect.

Hint: Use your class notes or official CompTIA N+ resources to clarify each topic?

Answer: • Topic 1: IP Addressing (Subnetting)

- Incorrect Concept: Calculated the wrong number of usable hosts for a /26 subnet mask.
- Why it was wrong: I forgot to subtract 2 addresses for the Network ID and Broadcast IP, selecting 64 instead of 62 usable hosts.
- Topic 2: OSI Layers (Data Encapsulation)
- Incorrect Concept: Identified the Layer 3 Protocol Data Unit (PDU) incorrectly.
- Why it was wrong: I selected 'Frames' instead of 'Packets'. Frames belong to Layer 2 (Data Link Layer), while Packets belong to Layer 3 (Network Layer).
- Topic 3: Cabling Standards (Fiber Optic)
- Incorrect Concept: Choosing the right cable type for a 10 Gbps connection over a long distance (5 km).
- Why it was wrong: I wrongly selected Multimode Fiber (MMF). For distances greater than 2 km, Single-mode Fiber (SMF) must be used because it has less signal attenuation over long ranges.
- Topic 4: Network Security (Firewall Rules)
- Incorrect Concept: Configuring an Access Control List (ACL) to block unsecured web traffic.
- Why it was wrong: I blocked Port 80 but forgot to account for implicit deny rules at the end of the ACL, which accidentally blocked all other legitimate traffic as well.

Question: 3

Pick one weak area from your mock exam results (e.g., subnetting, wireless standards, network troubleshooting) and create a one-page summary sheet with key facts, formulas, and diagrams to help you remember it?

Answer: • Key Facts:

- **IPv4 Address Size:** Ek standard IPv4 address total 32 bits ka hota hai, jise 4 octets (8 bits each) me divide kiya jata hai.
- **Subnet Mask:** Yeh network engineering me yeh identify karne ke liye use hota hai ki IP address ka kaun sa part Network ID hai aur kaun sa part Host ID.
- **CIDR Notation:** Isme subnet mask ko slash / (jaise /24 ya /26) ke sath likha jata hai, jo active network bits ki sankhya ko darshata hai.
- **Essential Formulas:**
 - **Total Subnets:** 2^n (Jahan $n = \text{borrowed network bits}$).
 - **Total Hosts per Subnet:** 2^h (Jahan $h = \text{remaining host bits}$).
 - **Usable Hosts per Subnet:** $2^h - 2$ (Isme se 2 addresses subtract kiye jate hain—pehla address Network ID ke liye aur aakhiri address Broadcast ID ke liye).
 - **Magic Number (Block Size):** $256 - \text{Subnet Mask Octet Value}$ (Yeh agle subnet ki starting range batata hai).
- **Quick Reference CIDR Table:**
 - /24: Subnet Mask 255.255.255.0 | Usable Hosts = 254
 - /25: Subnet Mask 255.255.255.128 | Usable Hosts = 126
 - /26: Subnet Mask 255.255.255.192 | Usable Hosts = 62
 - /27: Subnet Mask 255.255.255.224 | Usable Hosts = 30

Question: 4

List 5 exam strategies you will use during the final CompTIA N+ exam to maximize your score (for example: time management, process of elimination, flagging tough questions, reviewing marked answers, etc.)?

Answer: • 1. Time Management (The First Pass Strategy):

- CompTIA exams me Performance-Based Questions (PBQs) shuruat me aate hain jo kafi time lete hain. Strategy yeh hogi ki unhe shuru me skip karke pehle saare

short Multiple Choice Questions (MCQs) complete kiye jayein taaki aakhir me hard questions ke liye ample time bache.

- 2. Flagging Tough Questions (The Mark for Review Feature):

- Kisi bhi aise question par 1-2 minute se zyada waste nahi karna hai jisme doubt ho. Us question par apna best guess laga kar use "Flag/Mark for Review" kar dena chahiye taaki poora paper khatam hone ke baad un par wapas aaya ja sake.

- 3. Process of Elimination (PoE):

- MCQs ko solve karte waqt pehle un options ko eliminate (hatana) karna hai jo logically galat hain (jaise agar Layer 3 ka sawal hai toh Layer 2 ke protocols wale options hatana). Isse sahi answer guess karne ki probability 25% se badhkar 50% ya usse zyada ho jaati hai.

- 4. Keyword Hunting (Reading the Last Sentence First):

- CompTIA ke scenario-based questions kafi bade hote hain. Sabse pehle question ki aakhiri line padhni chahiye taaki yeh samajh aaye ki exact requirement kya hai, aur phir pure paragraph me se key terms (jaise MOST likely, LEAST expensive, Secure) ko dhoondhna chahiye.

- 5. Reviewing Marked Answers (No Empty Answers):

- CompTIA exam me negative marking nahi hoti hai. Isliye final review screen par yeh check karna zaroori hai ki koi bhi question un-attempted na chhuta ho, aur flagging wale questions ko cross-verify karke final submit karna chahiye.

Question: 5

Use ChatGPT or another AI tool to generate 3 new CompTIA N+ style questions in your weakest topic area, then answer them yourself and check if your answers are correct.

Hint: Ask the AI to explain each correct answer so you understand the reasoning.?

Answer: • Practice Question 1:

- Question: A network administrator needs to split a 192.168.1.0/24 network into subnets that can support at least 30 usable hosts per subnet. Which CIDR notation should be used?

- Options: A) /25, B) /26, C) /27, D) /28

- Correct Answer: C) /27

- Reasoning: Formula $(2^h - 2)$ ke hisab se, /27 me 5 host bits bachte hain. $(2^5 - 2 = 30)$ usable hosts milte hain, jo exact requirement ko poora karta hai.

- Practice Question 2:

- Question: What is the network ID (subnet address) for a host assigned with the IP address 192.168.5.45/26?

- Options: A) 192.168.5.0, B) 192.168.5.32, C) 192.168.5.64, D) 192.168.5.128

- Correct Answer: A) 192.168.5.0

- Reasoning: /26 subnet mask ka block size 64 hota hai, jisse pehla subnet 192.168.5.0 se 192.168.5.63 tak banta hai. IP address .45 isi range ke andar aata hai.

- Practice Question 3:

- Question: What is the broadcast address for the subnet 10.0.0.128/25?

- Options: A) 10.0.0.129, B) 10.0.0.191, C) 10.0.0.254, D) 10.0.0.255

- Correct Answer: D) 10.0.0.255

- Reasoning: /25 mask me total 128 IP addresses hote hain. Yeh subnet .128 se shuru hota hai aur .255 par khatam hota hai, isliye aakhiri address hi broadcast address hai.
